Yuvraj Singh Shekhawat

Software Engineer | Data Engineering and Analytics, Full-Stack Development, Applied AI

India | +91-86195-10246 | workwithyuvraj0712@gmail.com
Portfolio | LinkedIn | GitHub

SUMMARY

Software engineer who ships production-grade data and AI products fast by working with AI coding agents (Claude Code) across the full lifecycle: design, build, testing, evaluation and deployment. Strong in SQL, Python and dbt data pipelines, Node.js and FastAPI backends, and Next.js dashboards. Built and deployed three live platforms spanning fraud detection, event streaming with Kafka and multi-agent LLM orchestration, each backed by measured accuracy and automated tests.

EXPERIENCE

Software Engineer, Dealermatix Technologies Jun 2026 – Present
Full-time | Data Analytics, Salesforce

- Build Salesforce data pipelines that turn raw, inconsistent client data into clean, analysis-ready datasets.
- Clean, validate and standardise records to raise data quality and the accuracy of reported metrics.
- Analyse client datasets for actionable insights and build dashboards tailored to each client's reporting needs.

Product Designer (Freelance), Independent Clients 2024 – Apr 2026
Remote

- Designed web and mobile products end to end: user research, Figma prototypes, design systems and developer handoff.
- Delivered SaaS dashboards and B2B tools with reusable component libraries on fast startup timelines.

PROJECTS

TrueUp: Card Payment Fraud Detection and Reconciliation
Python, SQL, DuckDB, dbt, FastAPI, Apache Airflow, Next.js, TypeScript

- Built SQL detectors for card-testing fraud, issuer outages, chargeback spikes and interchange overcharges: 96.6% recall and zero false alarms over 200 randomised runs, enforced in CI.
- Shipped a live lab where users plant their own attacks; the API generates a fresh card network and grades every detector in seconds.
- Built a ledger, processor and bank reconciliation engine graded against a hidden answer key: raised error precision from 0.561 to 0.999 (0.994 recall); reconciles 1M rows in about 7 seconds.
- Modelled authorizations, clearing, interchange, refunds and disputes in dbt, with schema contracts, data quality gates, quarantine of bad rows and idempotent backfills; 220+ automated tests.

Strata: Startup and Sector Intelligence Platform
Node.js, Express, MongoDB, Kafka, Redis, BullMQ, Next.js, Gemini API, Docker

- Built event-driven ingestion of Y Combinator and SEC EDGAR Form D data through Kafka into MongoDB with idempotent upserts: 465 companies and 136 verified funding filings.
- Classified companies by sector with an LLM plus a human review queue: 87.8% accuracy on a hand-labelled set versus 75.5% for a keyword baseline.
- Generated analyst briefs that drop any claim not backed by a cited source, with model fallback and a rule-based backup so the app stays up when the LLM is down; 140 automated API and Playwright tests.

HiveState: Multi-Agent AI Orchestration Platform
Next.js, TypeScript, React Flow, Supabase, PostgreSQL, Gemini API, OpenAI API

- Engineered a DAG workflow engine that detects circular dependencies and runs independent AI agents in parallel.
- Implemented SHA-256 state caching for idempotent execution, so failed pipelines resume without repeat LLM costs.
- Added human-in-the-loop approval, per-step cost tracking and circuit breakers that pause runs on budget or API failures.

SKILLS

Languages: SQL, Python, JavaScript, TypeScript
Data: dbt, DuckDB, PostgreSQL, MongoDB, Kafka, Apache Airflow, ETL, Data Modelling, Data Quality, Data Cleaning
Analytics and BI: Salesforce, Salesforce CRM Analytics, Power BI, Dashboards, Fraud and Anomaly Detection, Statistical Testing
Backend: Node.js, Express, FastAPI, Redis, BullMQ, Supabase, REST APIs
Frontend: React, Next.js, Tailwind CSS, Figma
AI and LLMs: AI-Assisted Development, Claude Code, AI Coding Agents, Gemini API, OpenAI API, Anthropic API, LLM Evaluation, Prompt Engineering, Multi-Agent Systems
Tools: Git, GitHub, Docker, Playwright, pytest, CI/CD, Vercel, Render

EDUCATION

Bachelor of Technology (B.Tech) in Computer Science, Vellore Institute of Technology 2022 – 2026
